

## INSTALLATION INSTRUCTIONS P/N C8008

## AXLE BEARING CONVERSION KIT

This kit will replace the adjustable wheel bearing found on Chrysler, Dodge and Plymouth vehicles with an 8-3/4" ring gear. Installation of this kit will eliminate adjustment from the end plate and oil leakage. The axle will be converted to a free-floating axle and the noise associated with the tapered roller bearing will be reduced. Use of a hydraulic press is required for proper installation.

## PARTS LIST

- 1) Bearing Assembly
- 1) Locking Ring

1) Gasket

## INSTALLATION

- 1. Drain the axle housing of all the gear lube and remove the axles.
- 2. Using the hydraulic press, remove the old bearing and retainer.
- Clean the axle thoroughly with solvent and remove any burrs from the axle at this time.
- Inspect the splines of the axle for straightness. Replace the axle if the splines are damaged or twisted.
- 5. Assemble the bearing onto the axle so that the mounting flange of the bearing is facing the axle flange.
- Slide the locking ring onto the axle and press it into place using a hydraulic press. Make sure that the bearing is fully seated against the axle flange shoulder.
- 7. Re-install the axle using the supplied gasket between the housing end and the bearing flange.
- 8. Re-fill the housing with the proper gear lube.
