Mounting instructions:

1. Mark the desired location for the harness bolt to be mounted. From the bottom side of the vehicle make sure there is adequate surface area for the plate to be welded to, and that you will not drill thru anything mounted to the floor panel.
2. Drill a ½" hole thru the floor panel in the marked location.
3. Using a grinding wheel, prepare the area around the drilled hole from the bottom of the vehicle to weld the mounting plate on.
4. Bolt the 7/16 Hex Bolt or Eye Bolt thru the floor to retain the plate on the bottom side of the floor panel for welding.
5. Weld the 4 corners of the mounting plate as shown to retain it to the bottom side of the vehicle

6. For C4911 torque the 7/16 Hex Bolt to 55 ft.-lbs.
For C4912 torque the Eye Bolt and Jam nut both to 30 ft.-lbs.
7. With the installation complete, we recommend painting any bare metal surfaces so it does not rust in the future.
