

MAG TUNE IGNITION WIRE SETS

THE STORY BEHIND MAG-TUNE

For over thirty years, **Moroso Performance Products** has been supplying the racing community with **high performance ignition wire** and producing replacement ignition wire for other companies. Moroso now offers our **MAG-TUNE** line of premium ignition wire available in both **universal** and **custom-fit** applications for most popular engines. **MAG-TUNE Ignition Wire** is Made in the U.S.A. at our Philadelphia, PA plant, and is perfect for those applications which require *better than O.E.M.* quality at replacement pricing. From the budget-minded racer to the consumer—**MAG-TUNE** is for those who want the same attention to detail that goes into each ignition wire set our company makes for the top levels of Circle Track and Drag Racing.

TECHNICAL FEATURES

The heart of **Moroso MAG-TUNE Ignition Wire** is its efficient conductor of stainless nickel alloy wire, wound 32 times per inch around a conductive, latex-coated, heavy fiberglass core. This conductor meets O.E.M. radio frequency interference (RFI) requirements and has **350 ohms of resistance** per foot. The lower the ohm resistance number, the more efficient the wire is. For example, our conductor operates at one-tenth the resistance of conventional “carbon core” conductors. **MAG-TUNE Ignition Wire** jacket is made from two layers of high-heat resistant EPDM that is separated by a nylon reinforcing pull tape for added pull strength. An inner insulation layer adds optimum dielectric strength while a silicone outer jacket offers superior heat and flame resistance. The spark plug boots are silicone to protect against high heat situations and encase sure grip, snap-lock terminals for positive connections.

MAG-TUNE Ignition Wire technical features create a high-performing wire set which in the long-run, will last longer to save you time and money over inferior replacement sets.
